Juan David Rodriguez Castelblanco

Software Developer | JavaScript · TypeScript · React · Node.js · AWS

Canada | +1 437-557-1222 | jdrcastel@gmail.com | jdrcastel.github.io/jdrcastel | linkedin.com/in/jdcastel | github.com/jdrcastel

Summary

Software developer focused on React, TypeScript and Node.js. Started with a React internship at the Government of Ontario, built a REST API on AWS with Docker and CI/CD, and now debugs production systems for enterprise SaaS platforms at OpenText, where I also built a browser extension the support team uses. Building IncidentHub and Casshy to keep growing as a developer.

Experience

Technical Support Specialist September 2025 - Present
OpenText *Waterloo, ON*

- Investigate production incidents for global enterprise customers on OpenText SaaS platforms (LoadRunner Enterprise, Application Lifecycle Management/Quality Center, UFT One); analyze failures and coordinate technical escalations.
- Debug authentication (SSO, OAuth 2.0), integration and performance issues using Linux/Windows, SQL, Jenkins and system logs; analyze ticket data to find root causes and recurring defects.
- Built Timer SaaS Team, a JavaScript (Manifest V3) browser extension used by the SaaS support team that returns agents to Available after breaks, with JSON logs and timer recovery after restarts (code).
- Partner with Operations, Engineering and R&D in an SLA-driven environment to resolve complex customer issues.

Application Developer (Internship) September 2022 - April 2023
Government of Ontario *Toronto, ON*

- Built an internal web page with React, my first time writing code for a real team.
- Worked with developers and designers on that page to fix bugs, add features and improve the user experience.

Projects

Fragments — Cloud REST API on AWS | *Node.js, Express, AWS, Docker* | API code | UI code

- REST API on AWS to store and convert text and image fragments, with Cognito JWT auth, S3 and DynamoDB.
- CI with ESLint, Jest and Hurl integration tests; CD builds the Docker image, pushes it to ECR and deploys to ECS.

IncidentHub | *TypeScript, NestJS, PostgreSQL, Prisma, Zod, LLM API, Docker* | Code

- NestJS REST API for incident management with priority-based SLAs, breach detection and ticket status workflows.
- LLM-assisted triage that summarizes new tickets and suggests a priority, with a human confirming each recommendation.

Casshy | *TypeScript, Next.js, NestJS, PostgreSQL, Prisma, Turborepo*

- Canadian personal-finance app combining budgeting, financial education and a virtual companion; vision and ADRs done.
- Defined the architecture (monorepo, pure domain packages), integer-based money handling and versioned tax rules.

Skills

Programming: JavaScript (ES6+), TypeScript, HTML/CSS, SQL, Bash
Frontend: React, Next.js, Redux, Responsive UI
Backend & APIs: Node.js, Express.js, NestJS, Prisma, RESTful APIs, Microservices, OAuth 2.0
Cloud & Delivery: AWS (ECS, ECR, S3, DynamoDB, Cognito), Docker, GitHub Actions, Jenkins, CI/CD, Linux
Databases: PostgreSQL, MongoDB, SQL Server
Tools & Practices: Git/GitHub, Jest, Claude Code, GitHub Copilot, Agile
Currently Learning: LLM APIs, Prompt Engineering, Agentic Workflows, MCP, OpenAI Codex, Spring Boot
Languages: Spanish (native), English (professional)

Education

Computer Programming and Analysis (Advanced Diploma) May 2021 - April 2024
Seneca Polytechnic *Toronto, ON*
Relevant Coursework: Object-Oriented Programming, Cloud Infrastructure, Database Systems, Data Structures

Certifications and Achievements

- AWS Certified Cloud Practitioner
- President's Honour List, Summer and Fall 2023, Seneca Polytechnic
- Hispanotech volunteer: organized technical workshops and networking sessions for Latin American tech professionals.
